### The Model 700 Series of Signal Conditioning Instruments

Designed for measurement, display, and readout of mechanical and fluid power. Each is a fully-featured Data Acquisition system with Test Control capabilities. Each handles up to two hardware channels and one calculated channel.

- The 16 character by 2 line alphanumeric display provides easy to read menu selections.
- All manual adjustments have been eliminated. Calibration is performed automatically.
- Resolution is not compromised because there are no ranges to select. Resolution is 0.001% for any Full Scale value.
- Simplified keypad allows access to all channels, data types, and status without stopping a Test. Data is displayed in engineering units.
- There is no battery to change. System settings are stored in EEPROM memory.
- There is no filter to change or fan to replace.

### Notes

- Percentage of Full Scale Torque Rating. A few models vary; see the listed Specification Sheet for complete specifications, outline drawings, features and options by going to our website.
- Higher range units have lower maximum speed ratings. See listed Specification Sheet.
- The maximum error component, per referenced Specification Sheet, expressed as a percentage of full scale. Bidirectional NIST traceable calibrations are performed on all models in our accredited laboratory (NVLAP LAB code 200487-0). For more details visit the accreditation link: [www.nist.gov](http://www.nist.gov).
- Hardened against electromagnetic interference (EMI) produced by IGBT based adjustable speed drives (ASDs) and magnetic fields from electric machinery; see Specification Sheet 708.
- Standard is dual 5V outputs both available simultaneously; one high frequency and one low frequency; see bandwidth column.
- Option L changes standard 5V outputs to 10V. See Note 11.
- Standard dual outputs are dc to 1 Hertz and dc to 500 Hertz.
- Option K converts the dc to 500 Hertz output to dc to 1,100 Hertz.
- MCRT® 79000V Torquemeters have four simultaneous outputs; a dual output for the Low Range and a dual output for the High Range.
- Requires a strain gage carrier amplifier with carrier frequency equal to 3 kHz ± 10% and well-regulated voltage between 3 and 6 Vrms. Himmelstein Models 701, 711 or 721 are recommended.
- Standard units require unipolar power between 10.5 and 24 VDC. When equipped with Option L, sensor requires power between 18 and 24 VDC.
- Speed Pickups are optional on all models.
- MCRT® sensors use bonded strain gages, non-ferrite rotary transformers and high strength alloy steel torsion members, except ranges < 12.5 lbf-in use titanium shafts.
- For ranges greater than 100,000 lbf-in (11,300 Nm), available accuracies are 0.1 & 0.05.

- MCRT® 79000V Torquemeters have four simultaneous outputs; a dual output for the Low Range and a dual output for the High Range.
- Requires a strain gage carrier amplifier with carrier frequency equal to 3 kHz  $\pm 10\%$  and well-regulated voltage between 3 and 6 Vrms. Himmelstein Models 701, 711 or 721 are recommended.
- Standard units require unipolar power between 10.5 and 24 VDC. When equipped with Option L, sensor requires power between 18 and 24 VDC.
- Speed Pickups are optional on all models.
- MCRT® sensors use bonded strain gages, non-ferrite rotary transformers and high strength alloy steel torsion members, except ranges < 12.5 lbf-in use titanium shafts.
- For ranges greater than 100,000 lbf-in (11,300 Nm), available accuracies are 0.1 & 0.05.

## A business built on company and product integrity.

Established in 1960, S. Himmelstein and Company makes the world's best torque sensors, transfer standards, and instrumentation. Standard products include rotating and reaction sensors from 10 ozf-in (0.07 N-m) to 22,000,000 lbf-in (2,500 kN-m) in virtually every mechanical configuration. All employ state-of-the-art strain gage technology and are calibrated CW and CCW to full capacity in our ISO/IEC 17025:2017 accredited laboratory.

## Calibration Services

*Accredited torque calibration services verify your unit's performance.*

Confirm the accuracy of your existing transducers through Himmelstein's expert Torque Calibration Services. All Himmelstein Torquemeters and Systems are calibrated CW and CCW to their full capacity in our NVLAP ACCREDITED LABORATORY, Lab code 200487-0. (Visit [www.himmelstein.com](http://www.himmelstein.com) or [www.nist.gov](http://www.nist.gov) for details)

Himmelstein will also recalibrate virtually any standard Torque Transducer or Torquemeter, US or foreign. Popular brands include Himmelstein, Lebow/Honeywell, PCB/Key, Sensor Data, Sensor Developments, HBM, Staiger-Mohilo, Kistler, Lorenz, Norbar, ETH, Datum, Futek, Magtrol and Manner.

In addition, you should consider registering your sensors on our secure website so that their calibration certificates are continuously available to you as a reference.

**To learn more, visit: [www.calibratortorque.com](http://www.calibratortorque.com)**
